EDUCATION

Master of Computer Science, North Carolina State University 2023 - 2025
Relevant Coursework: Software Engineering, Database Management Systems, Automated Learning and Data Analysis, Design and Analysis of Algorithms.

Bachelor of Computer Science, SRM Institute of Science and Technology 2019 - 2023

SKILLS

Programming Languages	Python, C++, C, SQL, HTML, CSS, JavaScript
Data Science and Machine Learning	Scikit Learn, Pandas, Keras, Tensorflow, PyTorch, HuggingFace
Software and Databases	Flask, Mysql, ReactJS, AWS, Bootstrap

EXPERIENCE

Volunteer Research Assistant Jun 2024 - Jul 2024
North Carolina State University *Raleigh, NC*

- Predicting GitHub close time for 10 datasets based on attributes such as number of commits and number of opened issues.
- Worked on reproducing the paper "Better Predictors for Issue Lifetime".
- Performed stratified K-fold cross-validation and evaluated the decision tree classifier based on precision, recall, and F1 score.
- Create reference implementations for demonstrating classifier models.

Python Developer Intern Jun 2022 - Aug 2022
Loyalty Juggernaut India *Hyderabad, India*

- Captured organizational metrics periodically and present them using an analytics tool (AWS open search).
- Developed a code to call the GitHub API and access all the pull requests at Loyalty Juggernaut.
- Data collected is presented on a dashboard to analyze performance of the teams and track progress every month.

PROJECTS

Health Aware Constructed a health based chatbot using an LLM and RAG pipeline. Created a web app using HTML and React.Integrated FAISS for efficient vector storage, searching and accessed contents from online resources using BeautifulSoup.Used hugging face transformers to build question answering pipeline and used a quantized gemma 3 model.

Attrition Rate Detection Built models to predict attrition rate in employers, incorporated preprocessing techniques, orchestrated pipelines using adaboost and decision tree. Engineered robust features, performed exploratory data analysis and sampling to improve model performance across different metrics with the help of scikit learn and pandas. Adaboost pipeline generated the best performance across all metrics.

E-Textbook and assessment platform Worked on a course project which involved creating content for E-textbook and questions for assessment which could be accessed by student, admin, faculty and teaching assistant. Implemented creation and modification of chapter, section and content for the E-Textbook using Flask and MySQL. The database design was converted to BCNF to ensure efficient access for the queries.

Prediction of Rheumatoid Arthritis Using Deep Learning Techniques Predicts rheumatoid arthritis using an image dataset and CNN model, achieving a 98% training accuracy. The project was developed using tensorflow, keras and published in an IEEE conference.
